

KeepSafe®: A whole new breed of protection.

This year, two million homes will be burglarized by intruders. Their point of entry? Simple. Break the glass of a window or door.

The best protection, then, is a revolutionary, new deterrent used to strengthen windows and doors: KeepSafe® Glass.

KeepSafe® glass is made with a tough, plastic interlayer fused between two panes of glass. New in homes, this technology has proven itself both in the auto industry for windshields, and in the construction of jet aircraft canopies.

Even though you can't see the plastic, it's there.

Creating an impact-resistant barrier so strong it can withstand a direct hit from a crowbar. With repeated blows from bricks, stones, pipes, and other tools of the criminal trade, efforts at breaking and entering are rendered futile. The glass may be cracked, but the window or door will remain intact.

KeepSafe® stops the bad guys but doesn't stop there.

- **Safety:** After impact, glass remains intact, preventing accidental injury caused by hazardous shards of glass.
- **Sound Reduction:** The noise of traffic, airplanes and lawn mowers that is transmitted through ordinary glass is reduced up to 50%.
- **Solar Protection:** Absorbs ultraviolet rays of the sun, which can cause premature fading of home furnishings.
- **Value:** Enhances property value and may save insurance costs by reducing premiums.
